

Contraindications for Microneedling:

We will not list all of the health conditions that may apply, but if you have immune system issues related to a disease, it is best to get your doctor's approval before starting the procedure. These may include:

Active Acne

Herpes labialis or any other local infection such as warts

Moderate to severe chronic skin disease such as eczema and psoriasis

Extreme keloidal tendency

Accutane within 6 months

Blood clotting problems

Platelet abnormalities

Anticoagulation therapy

Facial cancer, past or present

Chemotherapy/radiotherapy

Steroid therapy

Diabetes and other chronic conditions

Pregnant or nursing

Fungal or bacterial infection

You must stop using Retin A, Retinols, Vitamin A Creams and other topical medication 3-5 days prior and 2-3 days following your microneedling treatment.

It is not recommended not to have microneedling done until 3-4 weeks after receiving neuromodulators such as Botox or Jueveau and at least 4 weeks after any fillers

It is recommended to wait at least 2 weeks after facial treatments such as waxing, laser hair removal, IPLs, chemical peels or dermabrasion.
